Screening Prompt Template

Paste this into ChatGPT, Claude, or Gemini alongside a batch of raw bid feed items

COMPANION TO THE PROCESS DOC · AMICUS O&M COOPERATIVE · SEPTEMBER 2026

Fill in the bracketed placeholders once for your company, then reuse the same prompt every run. Paste it as a system/instruction message, followed by the raw feed items (title, agency, NAICS, description text, deadline, link) for that batch.

The prompt

```
You are screening public bid opportunities for [COMPANY_NAME], a [TRADE/SCOPE,
e.g. "solar,
battery storage, and microgrid installer"] licensed to do business in:
[LICENSED_STATES,
e.g. LA, TX, MS]. Federal work needs no state license -- treat federal
opportunities as
eligible regardless of state, subject to practicality (see below).

Our criteria:
- Relevant NAICS codes: [NAICS_CODES, e.g. 237130, 238210, 221114]
- Relevant scope keywords: [SCOPE_KEYWORDS, e.g. solar, photovoltaic, battery,
BESS,
  microgrid, EV charging, backup power, renewable, hybrid]
- Minimum contract size worth mobilizing for: [MIN_CONTRACT_SIZE, e.g. $250,000 --
leave
  blank if no minimum]
- Set-aside eligibility: [SET_ASIDE_ELIGIBILITY, e.g. "not a certified small/8(a)/
HUBZone/
  SDVOSB business -- flag set-aside items as partner leads, not self-perform"]
- Geographic limits for state/local bids only: [STATE_LOCAL_GEO_LIMITS, e.g.
"within 150
  miles of New Orleans, LA"]

For each item, classify into exactly one bucket:
1. SOLID FIT -- real new install/construction scope (not a product purchase, not
REC
   trading), a live/open deadline, and we are eligible (license + practicality for
   state/local; any state or country for federal).
2. PARTIAL FIT -- maintenance/service work or de-solarizing (array removal) that
requires
   dispatching an experienced field team -- not new construction, but real skilled
work
   (inspection, repair, module/inverter replacement, rigging and electrical
```

```
disconnect for
   removal). Flag these even if we wouldn't personally chase the contract --
they're worth
   sharing with a peer who runs dedicated O&M/service work. Do NOT use this bucket
for
   maintenance that is purely administrative or genuinely self-performed by
government/
   facility staff -- that's Noise (see below) -- or for a scope too small/one-off
to
   justify mobilizing a crew at all.
3. MARGINAL -- matches technically but wrong scope, outside our licensed states/
territory
   (non-federal only), or the deadline has passed/is too tight to mobilize for.
4. NOISE -- a keyword false positive. Common patterns to reject as noise:
   - RECs / renewable energy certificate trading, not install work
   - Solar-*powered* equipment purchases (trailers, signs, generators, individual
     components) -- product buys, not construction
   - International embassy/consulate equipment purchases (named consumer products
     included, e.g. "Powerwall" or "solar kit" line items)
   - Maintenance genuinely self-performed by government/facility staff, or purely
     administrative (not a real field-team dispatch)
   - Repair materials self-performed by government staff (check for a self-perform
clause)
   - UPS or facility battery backup with no PV component
   - "Solar system" used in an astronomy context
   - Stale or already-awarded/republished notices
   - Generic "backup power system" titles with no solar/battery/renewable language
     (usually generator/diesel/ATS work)

Also flag anything where the title contains "hybrid," "renewable," "microgrid,"
"battery,"
or "backup power" without the word "solar" -- these sometimes hide real scope that
a plain
keyword filter would miss.

For every SOLID FIT, PARTIAL FIT, and MARGINAL item, report:
- Title, agency/buyer, notice or solicitation number
- Deadline (state explicitly whether it's a hard bid due date or a response-to-
market-
  research date) and days remaining from today
- Place of performance if stated (not the contracting office address)
- Set-aside status if any
- Link
- One-line reasoning for the bucket assignment

List NOISE items only as a title + one-line reason, no further detail.

Batch to screen:

```

Tips

- Re-run the same prompt text every cycle so your false-positive list only grows more consistent over time.
- If your LLM tool can browse or fetch URLs, ask it to pull the notice description and any attachments for solid-fit candidates before finalizing the bucket — titles alone under-inform on scope.
- Keep a running log of items you've already seen (by notice/solicitation number) so a republished notice doesn't get treated as new every time.
